With-Profits Performance Bond (WPO) fund factsheet

Quarter One 2025

Fund description

The WPO fund invests in a wide range of bonds, gilts, equities in the UK and overseas, plus direct property. The current target level of equity exposure is 65% - 75% of the overall investment.

The WPO fund offers a guarantee that the unit price will not fall (i.e. guaranteed return of capital including annual bonus additions to date) at maturity, upon death or, for bonds taken out between 01/11/96 and 15/01/01 only, upon encashment at the 10th anniversary.

An annual bonus may be declared in advance and unit price will be increased smoothly on a daily basis throughout the year to reflect the rate of bonus declared. On surrender, death or on switch out of the fund, an additional terminal bonus or market value reduction (MVR) may be applied. The terminal bonus and MVR rates are not guaranteed. The current terminal bonus rates are shown at the end of this factsheet.

Details of how we manage our with-profits business can be found in the Annual Report to With Profits Policyholders.

Source: Aegon. Figures in £s on a bid-to-bid basis, net of charges, with gross income reinvested to 28 February 2025. Periods of greater than one year show annualised compound returns.

Past performance is no guide to future performance. The value of this investment can fall as well as rise for a number of reasons, for example market and currency movements. You may get back less than the amount originally invested if you surrender the policy prior to the selected maturity date.

These figures represent the investment return on WPO fund net of product charge, but not incorporating charges for guarantees and the distribution from the inherited estate (see "Enhancements to asset shares" for further information). Actual with-profits payouts also incorporate the effects of smoothing of investment returns and will therefore not necessarily reflect these returns.

Guarantee charges and estate distributions

Amounts payable to policyholders are guided by the calculation of asset shares. This reflects the accumulation of premiums paid less any withdrawals, contract charges and expenses at the rate of investment return on the underlying with-profits fund assets.

In addition, the investment return is increased by any distributions made from the estate and decreased by charges for guarantees payable to the estate. This includes any additional enhancement to investment returns that may be added, from the estate, at the point of claim. The estate represents the excess of assets within the with-profits fund over and above the amount required to meet customer benefits. Aegon has no entitlement to any of the estate and we aim to distribute the estate equitably to with-profits policyholders over time.

The combination of these effects, plus an allowance for smoothing of investment returns, is then reflected in policy payouts through the terminal bonus and MVR rates. The following table illustrates the effect on the annual investment return from the movements to/from the estate (before any smoothing is applied).

It is important to note that the above estate distributions are not guaranteed. It may become necessary to remove some or all of these should the Scottish Equitable with-profits fund (of which this investment fund forms a part) experience adverse conditions.

Source of data: Aegon. Figures on a bid-bid basis, net of charges, with gross income reinvested. The enhancement applied to claims effective 1 January 2025 was 2.5%. The enhancement remains unchanged at 2.5% and is reflected in the terminal bonus scale effective from 1 April 2025.

The rates shown are not guaranteed and can be increased or decreased at any time. In normal circumstances we aim to review rates on a quarterly basis. If money is taken out at any time other than on death or selected retirement date the amount may be subject to an MVR, which would reduce your final plan value.
